As against 3QFY20, net sales of the Company during 4QFY20E are expected to shy away by 15%QoQ largely on the back of reduced dispatches sold (down ~18%QoQ) amid countrywide lockdown situation during the period. This is despite ~+4%QoQ expected improvement in LUCK's overall retention prices. Gross margins of the Company, however, are expected to decline to 9% as against

12% reported sequentially. This is largely due to heavy underutilization of South plant, restricting LUCK to optimally spread out its fixed overheads. To recall, lockdown conditions in Sindh were more severe in intensity and extended as compared to North. Utilization levels of the Company for 4QFY20E are expected to remain at 60% (North: 63% | South: 56%) as against 73% achieved in 3QFY20 (North: 62% | South: 89%). Other income of the Company is expected to revert to normal levels of PKR 0.9bn as against PKR 1.28bn reported in 3Q whereas low effective tax rate is expected to continue, courtesy available tax credits.

Exhibit: Quarterly region wise sales volume of LUCK

South sales volume and capacity utilization for 4QFY20 was heavily affected due to severe lockdown in Sindh

Exhibit: Per bag financial performance data of LUCK

Underutilization of South plant kept cost structure per bag high for 4QFY20, thus dragging profitability despite increase in retentions
